### Multiple sclerosis - NHS

Multiple sclerosis (MS) is a condition which can affect the brain and/or spinal cord, causing a wide range of potential symptoms, including problems with vision, arm or leg movement, sensation or balance. It's a lifelong condition that can sometimes cause serious disability, although it can

[Multiple sclerosis | Treatment summary | NICE](#)  
Provided by NICE

Multiple sclerosis is a chronic, immune-mediated, demyelinating inflammatory condition of the central nervous system, which affects the brain, optic nerves and spinal cord, and leads to progressive severe disability.

[About MS | Multiple Sclerosis Society UK](#)

Multiple sclerosis (MS) is a neurological condition, that means it affects your nerves. You get it when your immune system isn't working properly. Your immune system normally protects you by fighting off infection, but in MS it attacks your nerves by mistake.

[What is MS? | Multiple Sclerosis Society UK](#)

Multiple sclerosis (MS) is a condition that affects your brain and spinal cord. In MS, the coating that protects your nerves (myelin) is damaged, and this causes a range of symptoms. In MS, the coating that protects your nerves (myelin) is damaged, and this causes a range of symptoms.

[Multiple sclerosis - Wikipedia](#)

Multiple sclerosis (MS) is a demyelinating disease in which the insulating covers of nerve cells in the brain and spinal cord are damaged. This damage disrupts the ability of parts of the nervous system to communicate, resulting in a range of signs and symptoms, including physical, mental, and sometimes psychiatric problems.

[Multiple Sclerosis - National Library of Medicine - PubMed ...](#)

Multiple sclerosis is thought to be an autoimmune disease in which the body's immune system destroys myelin. A disorder of the central nervous system marked by weakness, numbness, a loss of muscle coordination, and problems with vision, speech, and bladder control.

[Multiple Sclerosis: What is MS? Overview, Risk Factors ...](#)

Multiple sclerosis, or MS, is a long-lasting disease that can affect your brain, spinal cord, and the optic nerves in your eyes. It can cause problems with vision, balance, muscle control, and

[Multiple Sclerosis \(MS\) Symptoms, Causes, Treatment, Life ...](#)

Multiple sclerosis (MS) is thought to be an autoimmune disease; however, the exact cause is not known. Early

signs and symptoms of MS are fatigue, bladder and bowel problems, vision problems, and numbness, tingling, or pain in certain areas of the body. There is no cure for MS, however, the symptoms can be managed with medication and therapies.

#### **Multiple sclerosis - Symptoms - NHS**

Multiple sclerosis (MS) can cause a wide range of symptoms and can affect any part of the body. Each person with the condition is affected differently. Each person with the condition is affected differently.
