Nickel: Because of nickel's bright, metallic appearance, it can serve as a suitable and less toxic substitute for chrome when plating plastic automotive parts. Nickel also provides protection against corrosion and wear. Alloying nickel with other metals such as tin and tungsten can increase the hardness of the nickel deposit and enhance its corrosion and wear resistance capabilities.

[Nickel electroplating - Wikipedia](#)

Nickel electroplating is a technique of electroplating a thin layer of nickel onto a metal object. The nickel layer can be decorative, provide corrosion resistance, wear resistance, or used to build up worn or undersized parts for salvage purposes.
