N = 1 global supersymmetry and supergravity are
discussed using the superfield formalism. Supergravity
particle physics theories are presented, emphasizing the
role of gravitation in low energy physics.

Einstein's theory of general relativity is included automatically, and the result is said to be a theory of supergravity. It is also a necessary feature of the most popular candidate for a theory of everything, superstring theory, and a SUSY theory could explain the issue of cosmological inflation.

Nonperturbative super-QCD and supergravity. Consider how we typically incorporate super-QCD instantons into an effective supergravity theory. We obtain an effective action $S_{\text{eff}}(g, \hbar, \tilde{h})$ that describes the instanton corrections from super-QCD, which (unlike the supergravity we are supposed to be studying) is a renormalizable field theory; the \tilde{h} denotes that we often \times some
